

PRODUTO COM IA - RELATORIO 2026

State of AI in Product Management 2026

An author analysis of public sources on adoption, agents, productivity, governance and capabilities.

Rodrigo Tozato

22 July 2026

<https://produtocomia.com.br/en/guides/state-of-ai-in-product-management-2026/>

Method note

This is an author analysis of public sources accessed on July 22, 2026. It is not a Produto com IA field survey and does not represent every Product Manager or organization.

Executive summary

Signals from 2026 point to a transition from isolated AI use to longer, integrated, task-oriented workflows. Tool availability does not guarantee context, trust, governance or product outcomes.

Method and limitations

The analysis compares public reports about product work, employment and enterprise AI. Sources use different populations, products and methods, so percentages were not combined. Vendor reports reflect their platforms and profession surveys reflect recruitment and respondents. These are signals, not universal causality.

Five signals

Signal	Product implication
AI moves beyond conversation	Measure completed tasks, tools, cost, time and effects.
Depth matters more than access	Tool distribution does not prove capability or outcomes.
Local context matters	Use Brazilian evidence and disclose sample limits.
Judgment remains central	Verify evidence and preserve human accountability.
Governance enters the workflow	Inventory, evaluation and monitoring follow the lifecycle.

Author recommendations

1. Measure correctly completed tasks and quality, not only active users.
2. Start with frequent, reversible and testable workflows.
3. Preserve the path from synthesis to original evidence.
4. Version instructions, models, tools and evaluation sets.
5. Treat AI capability as product practice, not only prompt training.
6. Match autonomy to risk, approval and meaningful contestability.
